

Scania

- Scania Citywide GN14

Scania Citywide GN14

Startup

To start the bus you need to press "E" to increment the position of the key. Press "M" to decrement.

Position 0: Remove key

Position 1: Insert key / shut off electrics

Position 2: Start electrics / stop engine

Position 3: Ignition on

Position 4: Start engine, hold "E"

CAUTION!

If the engine is on high idle speed due to cold temperature or activated by the high idle switch, start with caution. Due to the high RPM the torque converter is very strong on idle speed. It is recommended that you wait until the RPM reaches the normal state.

Door control

All three doors are manually controllable. The third door can be controlled automatically as well.

Third door manual: Door clearance switch, (-) key on the numpad

Third door automatic: 20h-switch, Roll-Key on the keyboard

- 1 Status indicators**

Driver's Information Display

The driver's information display can be controlled with the display page change switch (3) and the arrow keys (6). When driving you can only use the page change switch (3). It can cancel messages and shows pressure and fuel status. The arrow keys can only be used when standing still, engine stopped and ignition switched on. Press "i" to call the main menu. With the arrow keys you can select a menu.

Up: Recall warnings

Down: Open settings

Left: Exit menu or go back

Right: Show status pages or confirm a selection

Atron-Printer
